

THE STUDIO SHED

20m²

FROM

\$9,350 inc. GST

Work, Create, Relax—Your Studio, Your Space.

The Studio Shed is designed to be whatever you need it to be—whether it's a home office, gym, backyard retreat, she shed, kids' hideaway, storage solution, or even a games room. We supply the steel frame kit and give you the freedom to design the interior to suit your needs.

As industry leaders in large-scale steel buildings, we've brought our trusted engineering expertise to the backyard shed. Made from premium BlueScope Steel and clad in genuine COLORBOND® steel, the Studio Shed is made using high quality materials Australians have relied on for decades.

Fully engineered and compliant, the Studio Shed is designed to be self-assessable—meaning fewer roadblocks with local councils, and in some states, no council approval required.*

INTERIOR

Note: Fit out and furnishings shown for illustrative purposes only.

THE ULTIMATE BLANK CANVAS

The Studio Shed is a steel frame and cladding kit you can trust to stand the test of time and harsh weather, while providing you with the creative freedom to design the interior. Source your own doors and windows, linings, flooring, and more - creating the ultimate space at a fraction of the cost.

DIMENSIONS

4m x 5m x 2.6m

Window Openings - 900mm(h) x 900mm(w).
Door Opening - 2100mm(h) x 1800mm(w).
Height is measured from the lowest eave.

Note: Doors and windows are not included. Floor plan is indicative of opening size only.

STANDARD INCLUSIONS

- Colorbond® Steel wall and roof sheeting
- BlueScope Steel portal frame
- Vermin proofing
- All bracketry, bolts, and screws provided
- Full engineering certification
- Construction plans

IT'S WHAT'S ON THE INSIDE THAT COUNTS

BLUESCOPE STEEL

At Wide Span Sheds, we understand how critical premium quality steel is to the integrity of your structure. For this very reason, we guarantee that your steel kit building will include structural components manufactured entirely from premium, hi-tensile 450MPa or greater, BlueScope Steel. The structural components of the Studio Shed are made from Galvaspan® Steel by BlueScope. Galvaspan® is recognised globally for its quality and durable zinc coatings.

ENGINEERING AND COMPLIANCE

Wide Span Sheds is proudly an accredited ShedSafe supplier, meaning our engineering and designs have been reviewed and approved to meet the Australian building standards. All our sheds undergo site specific engineering to ensure the safety of your structure.

OPTIONAL FLOOR SYSTEM UPGRADE

For those looking for an alternative to a slab floor, our raised flooring system provides a solid platform for your fit-out. Instead of a traditional slab, the shed is elevated on steel bearers and joists (fixed to concrete piers) allowing the flooring system to sit 600mm above ground level giving you the freedom to install your flooring of choice. Concrete, floorboards, and associated fixings not included.

Galvaspan®

BUILDING THE STUDIO SHED

The Studio Shed is best suited to someone confident with tools and prior construction experience. If you're not confident in this area, we recommend engaging a qualified builder or handyman to assemble it for you.

TOOLS REQUIRED

If you're assembling the shed yourself, you'll need the following tools:

- Spirit level, measuring tape, clamps, metal snips
- Concrete hammer drill, impact driver, rivet gun
- Safety gear (gloves, glasses, etc.)

It's important to note that some cutting and drilling will be required.

KIT EXCLUSIONS

The Studio Shed kit includes the steel frame, bracketry, bolts, screws, and sheeting. However, you will need to source the doors, windows, flooring, and internal linings in order to bring your shed to life.

COUNCIL APPROVAL

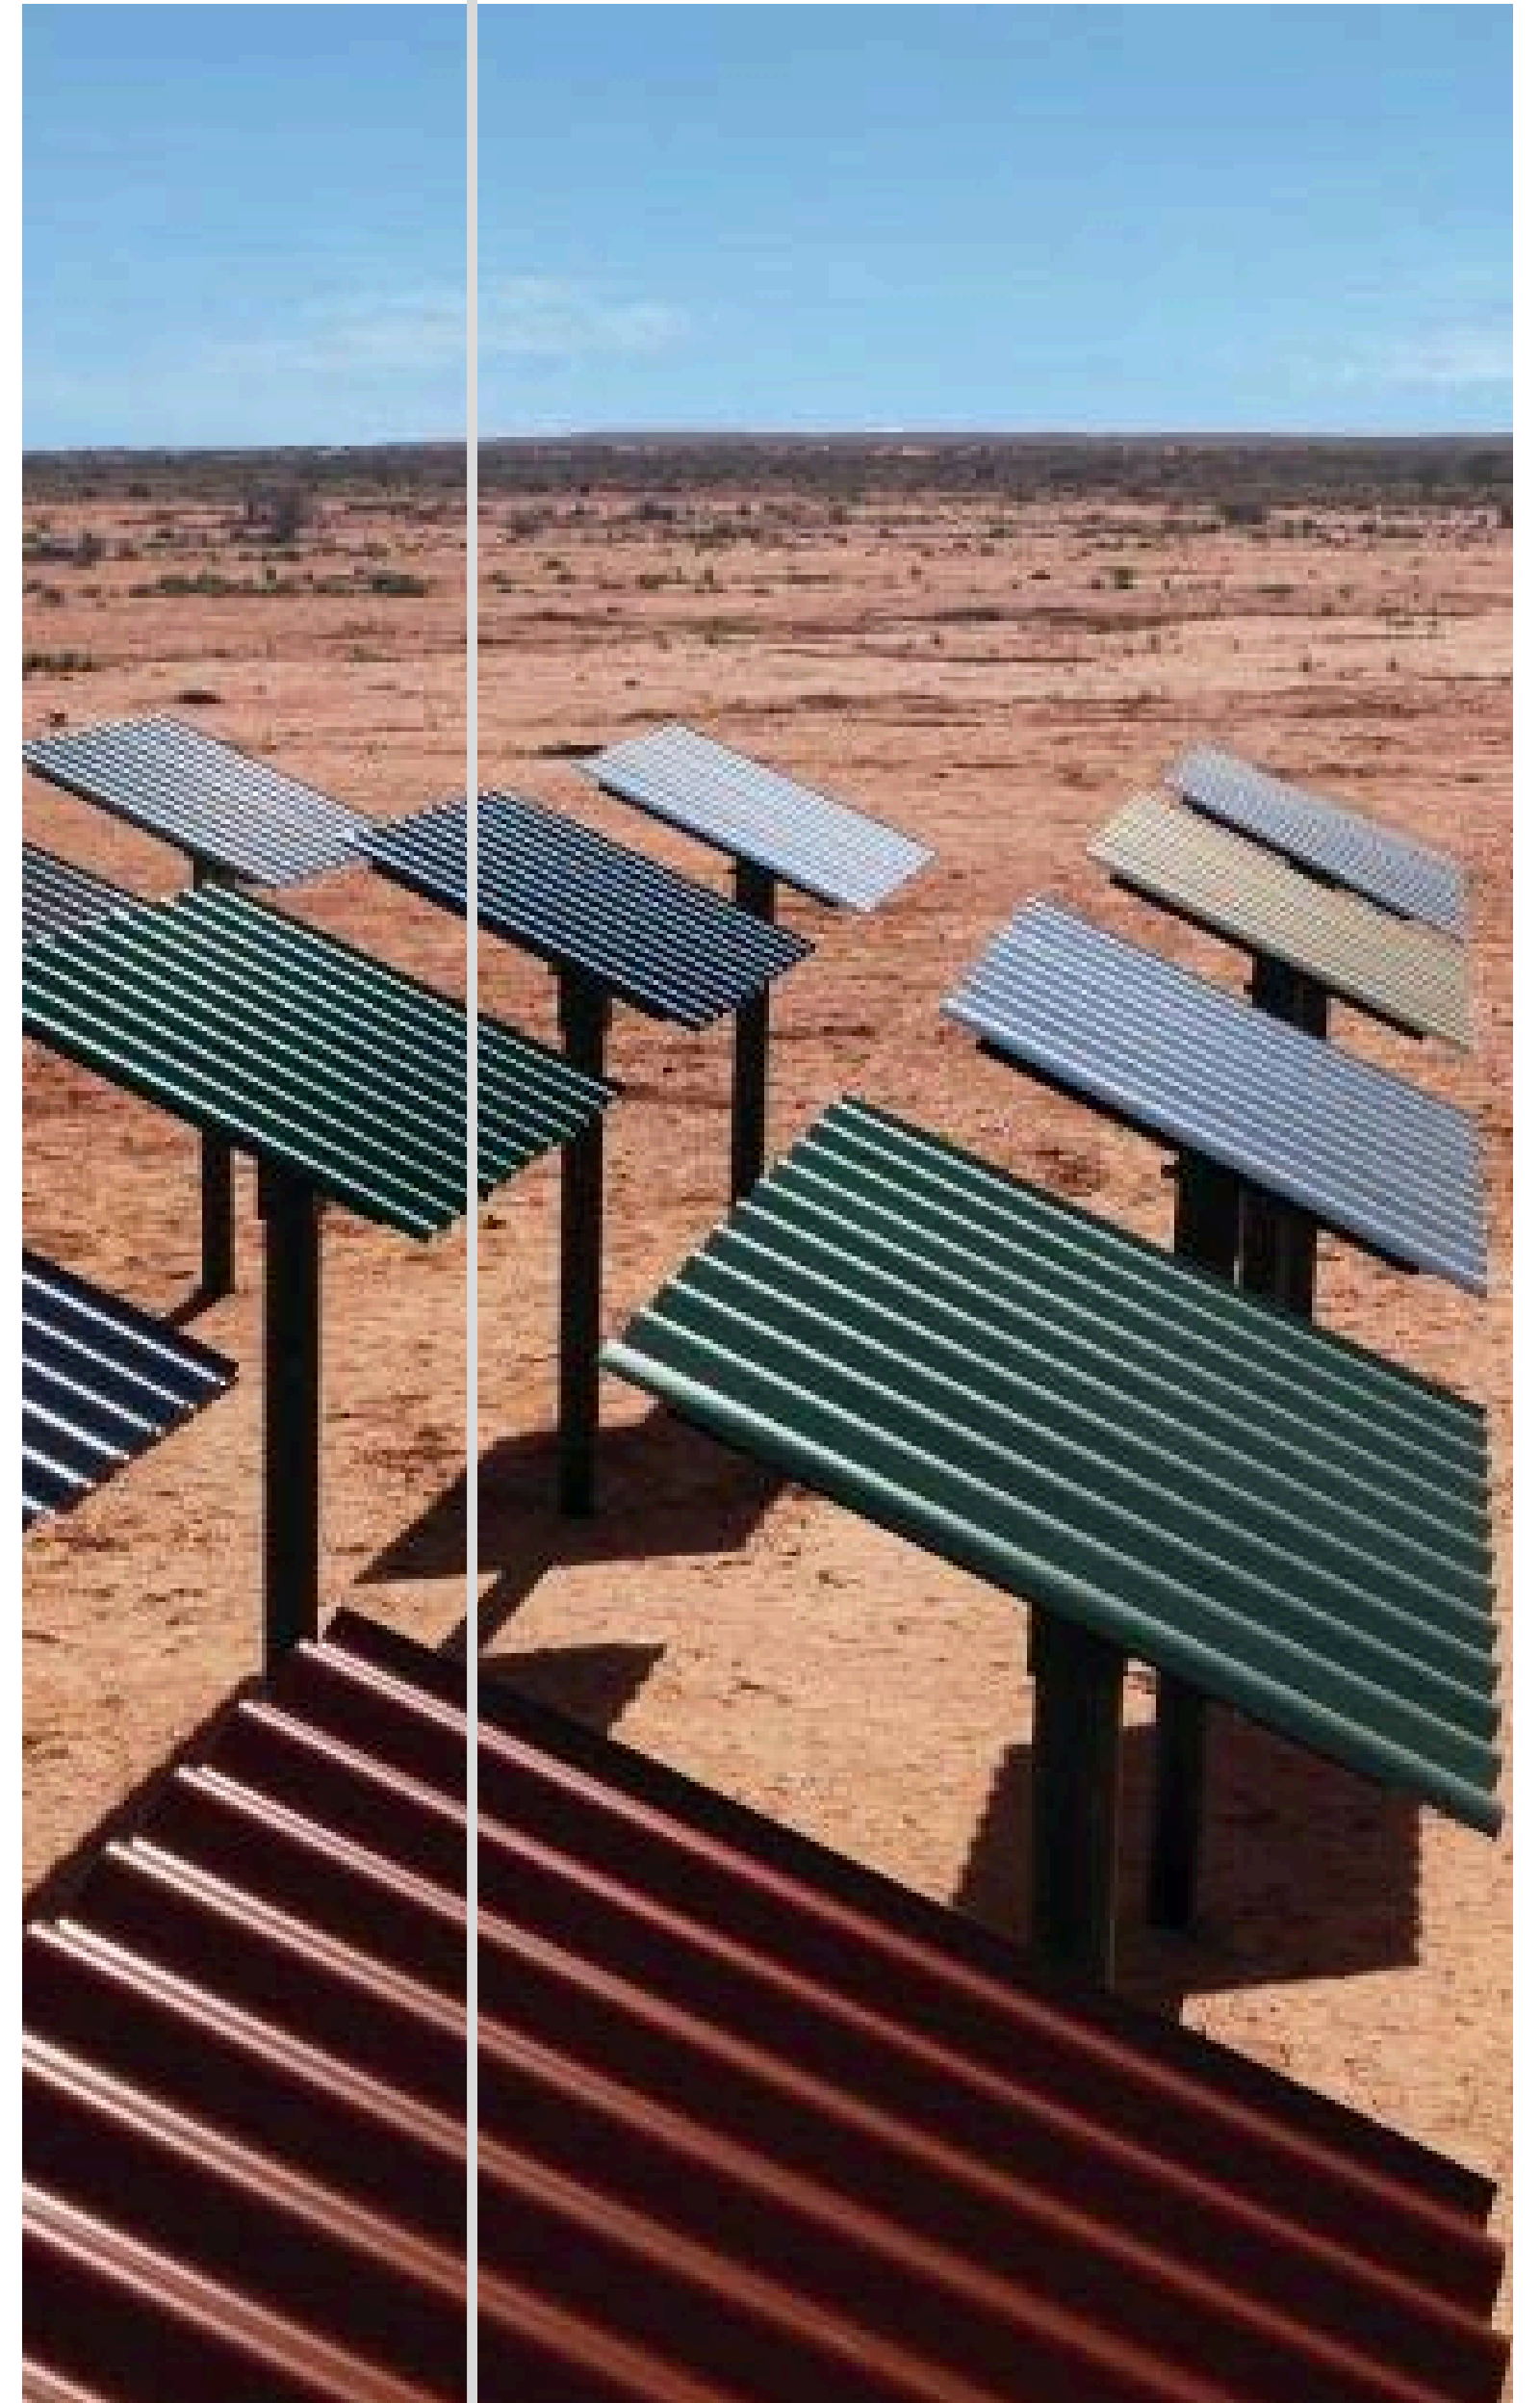

*If you're building your Studio Shed in New South Wales, this shed has been designed to meet the requirements of the state's self-assessable building guidelines, and may not require council approval.

However, requirements can vary, so no matter where you're located, always check with your local authority to confirm what approvals may be needed in your area.

COLOUR RANGE

Fifty years of Australian research and development has created a range of technologies that give genuine COLORBOND® steel its long lasting performance when subjected to some of the harshest Australian conditions. You can be sure you're getting the genuine article by looking out for the COLORBOND® steel branding on the product, or its packaging.

For roofing and walling, check for the ink branding on the reverse side of the sheet. On fencing, look for laser branding on either side of each panel; it appears at least three times in each 2.4m section. For guttering, look on the inside for ink branding, and you will find the protective wrapping that your COLORBOND® steel arrives in is branded too.
